***KEYNOTE SPEAKERS
James '59 & Lorna Mack***

Michigan Tech chemical engineering alumnus James A. Mack '59 and his wife, Lorna, donated \$2 million to establish an endowed chair in cellular and molecular bioengineering. Mr. Mack retired as President and Chief Executive Officer of Cambrex Corporation, a developer and marketer of specialty chemicals. His company has successfully combined biology with engineering—especially in the rapidly emerging field of tissue engineering and cell therapy, and the development of small molecule therapeutics.

James and Lorna Mack are dedicated to helping Michigan Tech achieve its vision—to grow as a premier research university of international stature, delivering education, new knowledge, and innovation.
